

WHY QUALITY ASSURANCE (QA) AND THIRD PARTY VERTIFICATION IS IMPORTANT

1

DO YOUR RESEARCH

Has your company done a risk assessment that considers what might occur if a third party company (such as Kannavis) is not used for QA. For example, the wrong product is sent, testing papers are not valid, product is not consistent with order request, time forgiven away from day to day operations etc.

2

PREPARE YOUR COMPANY

Avoiding and preparing your company to limit the exposure to high risk deals even if they are licensed and/or have verifications to prove their validity. Consider Kannavis as your "insurance policy".

3

KANNAVIS QA PROCEDURES

Before a shipment leaves a production facility, we have one of our dedicated employees conduct routine checks to ensure contract is not being broken such as ensuring product testing and correct package specifications, just to name a few.

4

THIRD PARTY VERIFICATION

We conduct third party testing using our own chromatography testing kit to ensure it meets your country's legal THC limits. This allows for peace of mind and ensures you are adhering to domestic laws when importing hemp biomass and CBD products.
